The Internet of Things (IoT), comprising millions of interconnecting communication devices, linked via the internet, and enabling information sharing globally (Davenport, 2013), is a growing reality and one likely to change the shape of supply chain management. A report by Gartner (2014) predicts that IoT, a disruptive technology (Christensen, 2015), will completely transform logistics, and the report forecasts a thirty-fold increase in internet-connected physical devices by 2020. IoT will support the assembly and communication of supply chains in previously unknown ways, and therefore impact on how information is accessed and shared by supply chain managers, according to Gartner (2014). 16 pp. Englisch.
