The Identification of Potentially Hazardous Material Discovered in and Around the Mesoamerican Reef Region of Mexico's Yucatan Peninsula (Paperback)

By Douglas E. Campbell

Lulu.com, United States, 2016. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.In 2007 an underwater survey of the coral reef system off Bahia de la Ascension (Punta Allen, Mexico) discovered 26 anomalies among the reef, ranging from man-made geometric patterns to unusual shadows to unusual bottom disturbances to possible debris fields. It is the search for and the analysis of the impact of these 26 anomalies that is the subject of this report. A Maritime Education and Research Society (MERS) Diving Team, supported by the Mexican Instituto Nacional de Antropologia e Historia, Subdireccion de Arqueologia Subacuatica (INAH) and the Sian Ka an Biosphere Reserve re-visited the area nine years later to inspect these 26 sites to ensure that the reef system remained healthy despite the findings of such anomalies, many of which were clearly man-made and resting on the reef.

Reviews

This publication might be well worth a read, and much better than other. It really is simplified but excitement inside the 50 % of the book. You will not feel monotony at whenever you want of the time (that's what catalogues are for concerning when you check with me).

-- **Imogene Bergstrom**

It is straightforward in read through safer to recognize. It really is full of knowledge and wisdom I am just easily could get a satisfaction of reading a created pdf.
