It was then recalled that the elastin used had been prepared some years before, and had been preserved with a solution of thymol in alcohol. That the blue color was due to thymol was confirmed by mixing some thymol with ten percent, ammonium hydroxide solution and obtaining the color on standing. Alcohol appeared to accelerate the transformation. By evaporating the ether extract (which was red), a purplish red oily product, soluble in ether, toluene, and alcohol, was obtained. On another occasion the...
